DETAILED ACTION

1. This Office action is in response to papers filed on 4/23/2009. Amendments made to the claims and Applicant's remarks have been entered and considered.
2. Claims 2, 3, 4, 7-9 and 11-15 are allowed.

RCE

Continued Examination Under 37 CFR 1.114

3. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/23/2009 has been entered.

Reason for Allowance

4. The independent claim (claim 1) has been narrowed to specify every details of the invention. The primary reason for the allowance of the claims is the inclusion of the feature that "one piece casting within which are the cooling channels and transverse ducts connecting the ends of cooling channels of adjacent quadrants". The examiner found Katsuzawa et al (US 5084642) being most relevant to the invention. However, Katsuzawa shows and discloses the cast housing is configured with three parts, and is silent to teach or suggest the cast housing is one piece structure for body and rear end face within which are the cooling channels and transverse ducts connecting the ends of cooling channels of adjacent quadrants. Nakano (US 4691131, US 4745314),

Art Unit: 2834

Nakamura et al (US 5448118) and Katsuzawa et al (US 5229673) shows cooling channels at four corners but fail to teach or suggest above mentioned limitation.

Khazanov et al (US 5616973) shows that cast housing is one piece structure for body and rear end face within which are the cooling channels and transverse ducts connecting the ends of cooling channels but failed to teach or suggest transverse ducts connecting the ends of cooling channels of adjacent quadrants. Matsubara et al (US 6239518) shows transverse ducts connecting the ends of cooling channels of adjacent quadrants but fails to teach or suggest cast housing is one piece structure for body and rear end face since back plate attaches to close the transverse ducts. The examiner found no prior art satisfies all above conditions.
